DETAILED ACTION

1. This office is in response to Remarks filed on Jan. 21, 2009.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Byers et al. (2003/0054865) in view of Kanerva et al. (7,340,246).

Regarding claims 1, 4, 11, -16, 20, 22-25, 31-32, and 34, Byers discloses a courtesy alerting feature for mobile electric devices comprising: detecting, by a processor, a call establishment request (see abstract, figs.1-2, step 202, paragraphs [0002] paragraph [0018]); in response to said detecting, alerting, by a transmitter, a called terminal (see figs.1-2, steps 204/206/208, paragraph [0018]); in response to said alerting, setting up, by the processor, a two-way connection between a calling terminal and the called terminal (see figs.1-2, steps 210/212/214/216 and paragraph [0019]), except determining, by the processor, that a two-way voice call between the calling terminal and the called terminal is not allowed for receiving, by a receiver, visual messages and conveying, by the transmitter. However, Kanerva discloses a transmission of information during call establishment comprising determining, by the processor, that a two-way voice call between the calling terminal and the called terminal is not allowed (see col.1, lines 29-32); receiving, by a receiver, visual messages via the

called terminal and/or the calling terminal (see abstract, col.2, lines 48-51); and conveying, by the transmitter, said visual messages to the calling terminal and/or the called terminal, respectively (see fig.1, block G). Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use Kanerva's the convey messages in Byers' invention to improve the use of mobile device in restrict areas.

Regarding claims 2-3, 9, 19, 26-30, and 33, Byers further discloses the determining is based on detecting a predetermined input via the user interface of the called terminal after said alerting (see paragraph [0006].

Regarding claims 5-8, 10, 17, Kanerva further discloses said conveying comprises converting said visual messages to speech (see abstract, col.2, lines 51-54).

Regarding claims 18 and 21, the feature of chatting in mobile devices is well known for improve the use of the wires devices.
